SUMMARY

Full-stack developer with experience building backend-driven web applications using Node.js, Flask, React, and SQL/NoSQL databases. Skilled in REST APIs, database optimization, Docker workflows, and scalable backend engineering with a strong foundation in clean software architecture.

TECHNICAL SKILLS

Programming Languages: JavaScript, Python, Java, HTML, CSS

Frameworks & Libraries: React.js, Node.js, Express.js, Flask

Databases: MySQL, MongoDB

Cloud & DevOps: AWS, Docker, Git, GitHub

Software Development: Data Structures & Algorithms, OOP, SDLC, Debugging, Unit Testing

ADDITIONAL EXPERIENCE

- Applied Git-based workflows and explored CI/CD concepts for automated build and deployment processes.
- Developed RESTful APIs and built web applications using React, with familiarity in Next.js (routing and SSR).
- Applied debugging and performance optimization across frontend and backend to improve efficiency and reliability.
- Practiced writing clean, modular, and maintainable code following OOP principles and software design best practices.

PROJECTS

MERN Stack E-Commerce Platform | Node.js, Express.js, React, MongoDB

- Built backend APIs and database workflows for authentication, orders, and products in a MERN e-commerce platform.
- Introduced role-based permission layers, ensuring secure separation of administrator and customer operations across 3+ access levels.
- Designed RESTful backend APIs for catalog, order, and transaction workflows, reducing average response latency from ~800 ms to ~600 ms.

Ride Sharing Web Application | Python, Flask, SQL, Firebase

- Designed and developed a ride coordination platform that handles trip records, participant information, and synchronized database transactions.
- Configured optimized relational queries, reducing the average retrieval time from 1.2s to 0.9s for ride schedules and traveler data.
- Facilitated in-app messaging, allowing passengers to share trip-related updates and coordinate shared travel plans.

AI-Based Image Processing Platform | Python, Firebase, Cloudinary, Gemini AI

- Constructed a cloud-based platform with Firebase and Cloudinary for automated image classification and structured metadata storage, processing up to 75+ images daily.
- Utilized a centralized image repository with version control, decreasing data redundancy by 15% and improving dataset consistency for the product development team.
- Organized shared repositories to enable collaborative image dataset maintenance and retrieval.

EDUCATION

Vellore Institute of Technology (VIT)
M.Tech (Integrated Software Engineering)

Expected 2027
CGPA: 8.34

VVNKM Senior Secondary School
Class XII

2022
Percentage: 87.6%

VVNKM Senior Secondary School
Class X

2020
Percentage: 87.2%

ACHIEVEMENTS & PROFILES

- HackerRank profile with a 5-star rating in Java programming challenges.
- Completed 100+ algorithmic challenges across LeetCode, CodeChef, and related coding platforms.
- Earned a professional web development certification from RINEX.
